GLOBAL CARE ANNOUNCES LAUNCH OF THE 'INTERLOCK™ SEATING SERIES'

MARKET APPLICATION

Medical Offices and Clinics, Long Term (Nursing homes) and Acute Care (Hospitals) Health Care Facilities.

DESIGN & INNOVATION

The NEW GlobalCare Interlock Series is a multiple seating series designed to be interconnected to form a variety of configurations from individual modular to beam grouping configurations ideal for hospitals, emergency waiting areas, clinics, lounge areas, lobbies, etc.

This Interlock Series is comprised of modular chair components which include: self-skinned urethane or wood arms; anodized aluminum legs; one, two and three seat modules, as well as medium back, high back and bariatric modules, supporting infection control programs through cleanable space allowing for fluid spill run-off, rather than absorption. There are also removable seat cushions for easy cleaning. Seat and back slip covers allow for an easy and economical replacement of damaged upholstery.

The key element in this new innovative system structure is the aluminum leg assembly with front feature strips of wood in a variety of finishes, aluminum in a contrasting color or black molded plastic for impact resistance and each provide a unique visual appeal. Interlock Series offers a variety of moisture proof, moisture resistant latex free anti-microbial and anti-bacterial upholstery that allow furniture to age more gracefully. The large variety of fabrics, vinyls and finishes available to designers make achieving the perfect look easy.

Unique to the Interlock seating system is the Perma-Mesh™ seat suspension that provides superior comfort and infection control benefits, where most other competitor seating utilizes an elasticized basket weave seating system that traps bacteria. Designed by Jim Hayward.
