

GLOBAL CARE ANNOUNCES LAUNCH OF ‘PRIMACARE™ RECLINING CHAIR’

MARKET APPLICATION

Long Term (Nursing homes) and Acute Care (Hospitals) Health Care Facilities.

DESIGN & INNOVATION

The PrimaCare Reclining Chair was designer specifically for health care applications including both long term and acute care facilities and it is utilized in these facilities to encourage the patient to become ambulatory and out of bed. The reclining action is activated simply by applying body pressure as you lean against the backrest. The back rest has a built-in lower lumbar support and comes with an ergonomic neck cushion which is height adjustable to the user. The seat cushion rests on a vinyl covered platform with elasticized webbing to conform with hospital cleaning and maintenance requirements. All foam content is high density and fire rated to meet California Technical Bulletin 117. Solid maple armcaps have been designed to aid the user in entering and exiting the chair. Much of the piping and stitch detailing which is typically found in conventional furniture has been eliminated for cleaning and wipe down purposes. PrimaCare is available in an extensive array of GlobalCare’s healthcare compliant fabrics and vinyls.
